	Ready for Jira	Released to PROD	Resolved	Closed
James Cooper	Prepare Case Management for Production Release		design flow Notification Reply to trigger Case Management actions design Task Acceptance flow design Task template entity provide Case Management Acceptance testing support	Build notification memberService and communityService change notification submit for direct calls to subscriptions complete architecture gap analyses for Case Mgmt Create an API to change notification policy delivery transport Create an API to configure Notification Delivery Transport Create an API to receive current set of notification policies create Case Management integration tests create Case Management interface tests create CLI -> grid-call-service integration testing (JC) Create individualNotification build deliveryRequest Create individualNotification policyLookup Create individualNotification queue processor Design DB schema for notification-service Design notification core models Implement communityNotification policyLookup Implement communityNotification queue processor Implement communityNotification spliter (split community into individual users) improve Case Management unit test coverage Migrate Schedule individual notification logic from API Server to notification-service Migrate Send community notification logic from API Server to notification-service migrate to V2 MPS Calls for Grid-Call-Service NotificationRequest build processor (read and store inbound notificationRequest and return notificationId) Redesign Delivery Policies Redesign notification process flow Separate communityNotifications from individualNotifications publish on separate queues Separate Delivery, Ack and Reply tracking information Update delivery policy
Oscar Aloff	authentication-service: Add custom user attributes like User ID to the Access Token authentication-service: Create OAuth2 Authorization Code Flow prototype using OKTA Identity provider authentication-service: Create OAuth2 Authorization Code with PKCE Flow prototype using OKTA Identity Provider authentication-service: Create OAuth2 Client Credentials Flow prototype using OKTA Identity Provider authentication-service: Create OAuth2 Resource Owner Password Grant Flow prototype using OKTA identity provider authentication-service: Get user info from Okta's access token authentication-service: Implement sample @PreAuthorize role restriction against Okta authentication-service: Integrate Spring Security with Okta authentication-service: Research getting the AccessToken via user credentials from Okta Evaluation: Create authentication-service prototype using OKTA service Prepare questions and use cases to discuss with OKTA's solutions team	provide template-service prod release support	create CLI -> grid-call-service integration testing (OA) finalize: mute/unmute/add/remove conference commands implement a conference participants list flow provide api-gate prod release support provide cli-service prod release support provide skype-integrator release support provide spark-integrator release support research Interface testing for Cloud Stream interfaces	Create authentication-service prototype using Spring Boot & Spring Security design testing framework implement testing framework
Pavel Belyantsev	add text under the Get Started button connect visitor analytics and user analytics using Alias element (see attached google doc) Fix names for the 'Manage Alerts' page -- page header and link in sidebar should be set to Manage Alerts match external header on setup.blg.com to marketing site modify analytics in SelfServ modify existing new user wizard user wants a clearer instruction that fields with RED asterisk are required	add Reset Password action add user role column to org list result create mockup for group actions implement member modify form update member add form with User Role field	provide self-serv prod release support	Add Usability Element: https://setup.bluelinegrid.com/edit-profile Copy edit: Congratulations toaster Copy edit: Password update Copy edit: Remove full screen icon False Positive Bug: When user adds email addresses on separate lines during bulk upload, form allows user to complete submit process but it in fact fails implement access by password reset link implement add member user form implement password change api integration implement tracking plan for Self Serve site UI Bug: Toaster Error user, after signing in, should be greeted with a homepage that offers some key actions user should be able to submit password change form (SELFSERV)
Simon Fox	Migrate functionality to Send Escalation Email from API server to Email-Service Review capability to use S3 storage system as template source	add user role column to org list result add user role parameter to update user service create a service to reset user password by coordinator request update add user service to accept user role	create update member profile service implementation implement service to reset password by coordinator request provide email-service prod release support provide onboarding-service prod release support	add generation of password change request for users created by coordinator role build a CI / CD pipeline for SelfServ create onboarding service integration tests create onboarding service interface tests create workspace member list / add member profile integration testing design Change Member profile service for Onboarding finalize Add Member API calls for onboarding implement service to reset password by coordinator request for onboarding improve onboarding service unit test coverage
Vasyl Kutishchev		provide call server production release UI Bug: Menu Collapse Error	confirm we have moved over any open issues from previous jira account, so we can shut down old jira instance	
Vladimir Novikov	fix analytics in GridTeam in Android			All security keys / tokens must be requested from backend system in Android code Fix massive authentication errors (401) from PPT service in Android code User wants to enable location sharing only for limited period of time in Android code
Yuri Shakula	fix analytics in GridTeam in iOS			All security keys / tokens must be requested from backend system in iOS code Fix massive authentication errors (401) from PPT service in iOS code User wants to enable location sharing only for limited period of time in iOS code
